

Short Workshops:

- A tool to support patients' adherence to home-based exercises in low back pain: description of a collaborative research and presentation of the final tool
- Adjunctive therapies following botulinum toxin injection in spasticity management: an evidence based workshop
- An overview of the wheelchair skills and maintenance training packages
- Cancer prehabilitation: models of exercise interventions, outcomes, and clinical application
- Controversies in intrathecal baclofen therapy
- Demystifying telehealth for remote therapeutic interventions and follow-ups
- Developing rehabilitation technology and services through participatory research
- Dynamic arthrosonography applications in physiatry short workshop proposal
- Dynamic prosthetic alignment workshop
- Ecologically valid tools for the assessment of executive functions and attention with patients who sustained acquired brain injury
- Fatigue in patients with multiple sclerosis: how to treat, how to measure, and how to find biomarkers?
- Gait assessment and orthotics prescriptions after ABI
- How to improve functioning in stroke survivors: relationship with nutritional status, balance and exercise capacity
- Innovations in virtual reality and biofeedback for advanced rehabilitation
- "It is my life". Self-management promotion in adolescents and young adults with childhood onset disability
- Mirror therapy: guidelines for its clinical practice and its future in the era of virtual reality
- Muscular and joint coordination in individuals post-stroke: what does technology bring to neurorehabilitation?
- Novel treatments for emotional self-regulation in chronic, moderate to severe traumatic brain injury
- Oral sensorimotor disorders: from evaluation to management
- Pain management in chronic pain

- Pathways to pain in myofascial pain syndrome
- Percutaneous tenotomy: a complementary solution for the treatment of the articular deformities of patients with muscle hypertonia
- Pulmonary rehabilitation in COPD
- Robot assistants for the elderly
- Sexual dysfunction after spinal cord injury
- Stem cells injections: applications in osteoarthritis
- Stroke rehabilitation guidelines: a global perspective
- Suit therapy for cerebral palsy: one size does not fit all
- Telerehabilitation for everyday practice
- The diagnostic nerve block with anesthetics as a pre-operative assessment tool in spasticity management
- The role of compression garments in the management of lymphedema
- The role of the kinetic chain in the injured overhead athlete
- Ultrasound evaluation of nerves: median and ulnar
- Ultrasound guided head and neck muscles and salivary glands injections
- Ultrasound-guided common and uncommon nerve blocks with alcohol for spasticity management
- Use of ultrasound to evaluate spastic muscles and guide spasticity treatment procedures
- Using inertial measurement units as tools for motor rehabilitation
- Work disability and vocational rehabilitation (VR): from assessment to intervention and the role of rehabilitation professionals
- Workshop in ultrasound guided chemoneurolysis of the lower extremities for spasticity management in adult and pediatric patients
- Workshop in ultrasound guided chemoneurolysis of the upper extremities for spasticity management in adult and pediatric patients
